

THE INCENDALYST™

Emission Control Device for Nieco Automatic Broilers

BENEFITS

- Easy to Install
- Low Maintenance—rinse with water
- Environmentally Friendly
- Reduced Hood Cleaning Costs
- All Stainless Steel Construction
- Works on Gas and Electric

Improving Sustainability By Reducing Broiling Emissions

The Nieco Incendalyst™ is an accessory designed for use with both gas and electric Nieco Automatic Broilers.

The Incendalyst™ utilizes catalytic converter technology, similar to that used in cars, to reduce smoke and other gases created when meat or other foods are charbroiled.

Reduction in overall pollutants is between 85-90% with visible emissions being virtually eliminated and odor significantly reduced.

By destroying grease vapor and smoke before it reaches the exhaust hood, the ventilation system stays much cleaner, improving operation and reducing the risk of grease build-up in the ducts, and the time between cleaning.

The Incendalyst™ sits directly on top of the Nieco broiler and requires no utility hook-up. The Incendalyst™ operates efficiently on the exhaust heat from the broiler.

Installation is simple and maintenance is minimal. The Incendalyst™ only requires daily rinsing with low pressure hot water and no chemicals.
